Norway Spruce (6-12’): Grows to 75 feet. Shiny, dark green 1 in. needles on spreading branches. Spruces are extremely hardy trees that are successful in most conditions. Suited for Christmas tree use and as an ornamental evergreen. They are also great for forming a protective windbreak.

Concolor Fir (4-8’): Grows to 100 feet. Gray trunk and soft silvery-blue foliage. Flat needles are 1 ½ inches to 2 inches long. Excellent for Christmas tree and ornamental use. They also have a pleasant citrus aroma. Concolor can withstand heat/drought better than other fir trees. Grows best in well-drained soils.

Eastern White Pine (5-10’): Fast growing to 100 feet. A five-needled pine, with soft 4 in. light green-blue needles. Makes an excellent ornamental as well as a Christmas or timber tree. Pines respond well to pruning and grow well in a wide variety of soils.

Colorado Blue Spruce (10-15’): Grows 60 to 100 feet. Produces stiff silver-blue needles about 1 inch in length. It is known as the ‘king of ornamentals’ and will create great wind-breaks if planted densely in a row. This spruce can tolerate most soil types and prefers low to medium moisture.

American Sweetgum (12-15’): Grows to 100 feet. Leaves are star-shaped and pleasantly fragrant when dropped in the fall. Fruits are round and tan that appear prickly, but is relatively soft to the touch. This tree provides food for songbirds, quails, turkeys, chipmunks, and squirrels. Prefers well-drained soils. Using 48” tree shelters are recommended.

Red Buckeye (4-8’): Grows to 20-30 feet. Flowers are bright red and tubular. This tree is a great backyard variety that brings in wildlife. 24” tree shelter suggested.

Sycamore (12-18’): Grows to 75 feet. Produces leaves 8-15 inches wide. Bark is modeled with gray and white. Prefers wet soils next to stream banks and/or in floodplains. Mature trees provide beneficial wildlife habitat. Using 48” tree shelters are recommended.

American Persimmon (10-15’): Grows to 25-40 feet. More than one tree is needed for pollination to produce fruit. It bares white fragrant flowers that are very sweet, a favorite of honey bees. Persimmon fruits are edible and make a great food source for wildlife in addition to recipes for jams, jellies, juice, pies, and flavorful wine. Can grow in a wide range of soils and in partial to full sun. 48” tree shelter suggested.

Shadbush Serviceberry (12-24’): Grows to 10 feet and is considered a shrub. In early spring, it produces drooping white flower clusters and tiny apple-like fruits. The fruit can be made into jams, jellies, and pies if you can get to them before the birds and other wildlife do! This plant is within the rose family and makes the perfect addition to a backyard landscape. 24” tree shelter suggested.

Grey Dogwood (12-24’): Grows to 10 feet. Has egg-shaped leaves, light grey branches, and blooms long cone-shaped clusters of white flowers in June and bares white fruit with red stems from July to October. Also great for landscaping and will attract songbirds. 24” tree shelter suggested.

Habitat Enhancers

* Purple Coneflower Seeds (Echinacea purpurea): This lovely native is a source for herbal remedy, such as immune-system boosting tea. It also has a high pollinator value for attracting butterflies and other insects. Prefers open meadows and well-drained soils. Blooms from June to September, growing between 5-6ft tall.

* Wildflower Seed Mix (Northeast Perennials and Annuals): This wildflower mix consists of 30 different species, containing a 1/3 mix of annuals and a 2/3 mix of perennials of both native and naturalized species that provide color throughout the year. Seeds should be spread in sunny locations.

* Butterfly and Hummingbird Seed Mix: This mix produces a diverse variety of annual and perennial flowers in a wide range of vibrant colors, including grasses for cover, that are designed to attract pollinators. Pollinators will benefit from this addition of habitat and will enhance your garden landscape.

24” and 48” Blue-X Tree Shelters: These durable, lightweight shelters give new seedlings needed protection against wildlife while also letting sunlight in for healthy growth. Tree Shelter Wooden Stakes: These wooden stakes accompany the tree shelters by providing support during the first 3 years of seedling growth.

Bluebird Box & Pollinator Hotel: These locally hand-built wooden boxes (built by the West Perry FF) feature an over-hanging roof and a recessed bottom with slots for dryness. They also have a swivel front opening for easy cleaning. Attach your box 4-6 feet high on a post facing the nearest tree or shrub, at least 100 yards away from other bird boxes. Pollinator hotels require little maintenance after placement, will attract mason bees and other busy bugs. Provides a nice home over winter.

ORDER DEADLINE IS MARCH 25, 2020

Orders are subject to availability. All seedlings must be purchased by placing a prepaid order. If any one species is sold out, the District will refund payment for those seedlings not available. All seedlings are sold with bare roots and their survival rate varies from site to site, from excellent to poor. We strive to provide the most viable seedlings available, and all efforts are made to handle the seedlings in a manner that minimizes root stress. The Perry Conservation District will not ensure successful plantings of bare root seedlings, just as our suppliers will not insure seedling survival. The District is not responsible for orders not picked up by 6P.M. on April 9, 2020.

For more information, please visit our website at www.perrycd.org or call 717-582-5138 or 717-582-8988 ext.4

Pick up your order on April 9, 2020 from 10a.m. — 6p.m. (In front of the old jail) 20 West McClure Street, New Bloomfield, PA 17068

THANK YOU FOR YOUR SUPPORT!
